Notes:

Consistent with an opinion issued on April 25, 2000, by the United States Court of Appeals for the District of Columbia Circuit (Court) that invalidated the 1999 quota and remanded the case to NMFS for further proceedings, NMFS intends to revise the 2000 summer flounder quota by August 1, 2000, to a level with at least a 50-percent chance of not exceeding the F target. The Court set a minimum standard for harvest quotas to comply with the Magnuson-Stevens Act, namely that quotas must have at least a 50-percent probability of achieving the target fishing mortality rate.

If negative late entries are present on this report, they are the result of corrections made to the database.

For the week ending **17-JUN-00**, 214 dealers held a federal summer flounder permit. Of those 214 dealers, 165 (77%) have submitted a weekly quota report for the current reporting week. Because Massachusetts dealers submit weekly quota reports directly to the state, the number of dealers that reported from that state for week ending **17-JUN-00** were not included in these calculations.

These data are the best available to NMFS when this report was compiled. Data are supplied to NMFS by dealers and/or state agencies and may be preliminary.

The following summary is updated as information is received, and may not reflect recent state actions. Readers are urged to contact the appropriate state agency for further information.
